OVERVIEW

A Multi National client premier client requested a team to assist with a unique acquisition.
business units, Infection Prevention and Pathology into their Quality Management System (QMS).
The Pathology business was new to the client.

RESULTS

Closed out and transferred a calibration management system to the new QMS on the infection prevention side as well as Design Controls, Supplier Quality Controls and Production and Process Controls.

APPROACH

The team included a seasoned project manager, two mid levels and a senior engineer. Our team ran the project from a project management perspective including, daily and weekly deliverables in conjunction with the client. Deliverable status and progress would be communicated on a weekly basis to the client.

CONCLUSION

A seamless integration of two business units into the clients QMS occurred on time and under budget.
The client was extremely happy with the team's collaboration with their personnel and the goals that were achieved.
